      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score

LDNA Cell Biol. 14.971-981(1995).

C -!- FUNCTION: MAY FUNCTION AS A REPRESSOR OR SILENCER PROTEIN, AND MOST LIKELY EXERTS ITS REPRESSING ACTIVITY UPON ZINC-DEPENDENT BINDING TO DNA. MAY BE INVOLVED IN PROPER SPERMATOGENESIS BY C REPRESSING THE EXPRESSION OF GENES UNNECESSARY OR INCOMPATIBLE WITH THE MAINTENANCE OF A HAPDOID CELL STATE.

C -!- SUBCELLULAR LOCATION: NUCLEAR.

C. NATI ACAD. SCI. U.S.A. 90:3787-3791(1993).

FUNCTION: THE ISOFORM ALPHA-1B GIVES RISE TO N-TYPE CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE CURRENTS. N-TYPE CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HVA) GROUP (BY SIMILLARITY).

SUBUNIT: VOLTAGE-DEPENDENT CALCIUM CHANNELS ARE MULTISUBUNIT COMPLEXES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS IN A 1:1:1:1 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE ALPHA-1 SUBUNIT. IN MANY CASES, THIS SUBUNIT SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILLARY SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFIDE BRIDGE REGULATE THE CHANNEL ACTIVITY (BY
                     DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (S4). S4 SEGMENTS POSITIVELY CHARGED THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION. PHOSPHORYLATED IN VITRO BY CAM-KINASE II, CAPK, PKC AND CGPH
                                                                                                            SUBCELLULAR LOCATION: INTEGRAL ALTERNATIVE PRODUCTS: AT LEAST ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSION
SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS

Putham E.A. Zhang H., Ramirez F., Milewicz D.M.;
"Fibrillin-2 (FBN2) mutations result in the Marfan-like disorder,
congenital contractural arachnodactyly.";
Nat. Genet. 11:456-458(1995).
-i- FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS
-i- FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS
THAT BINDS CALCIUM. FIBRILLIN-2-CONTAINING MICROFIBRILS REGULATE
THE EARLY PROCESS OF ELASTIC FIBER ASSEMBLY.
-i- DISEASE: DEFECTS IN FBN2 ARE THE CAUSE OF CONGENITAL CONTRACTURAL
ARACHNODACTYLY (CCA) (ALSO KNOWN AS BEALS SYNDROME). CCA IS
PHENOTYPICALLY SIMILAR TO MARFAN SYNDROME, BUT DOES NOT EFFECT THE
AORTA AND THE EYES.
-i- SIMILARITY: CONTAINS 43 CALCIUM-BINDING AND 4 NON-CALCIUM BINDING
EGF-LIKE DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              184
                                                                                                                                                                                                                                                                                                                                                                                                                           ALTERNATIVE PRODUCTS: THREE FORMS (VEGF-1, VEGF-2 AND VEGF-3) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. THE LONGEST FORM (VEGF-3, SHAMINER) CONTAINS A BASIC INSERT LINKED TO CELL-ASSOCIATION/HEPARIN-BINDING.

TISSUE SPECIFICITY: IN DEVELOPING EMBRYOS, EXPRESSED MAINLY IN THE CHOROID PLEXUS, PARAVENTRICULAR NEUROEPTITHELIUM, PLACENTA AND KIDNEY GLOMERULI. ALSO FOUND IN BRONCHIAL EPITHELIUM, ADRENAL GLAND AND IN SEMINIFEROUS TUBBLES OF TESTIS. HIGH EXPRESSION OF VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROID PLEXUS IN ADDULTS.
SIMILARITY: BELONGS TO THE POSF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7

"ENL, the gene fused with HRX in t(11;19) leukemias, encodes a
real nuclear protein with transcriptional activation potential in lymphoid
and myeloid cells.";

LE BLOOD 84:1747-1752(1994).

C. -I- FUNCTION: CAPABLE OF ACTIVATING TRANSCRIPTION FROM SYNTHETIC
C. REPORTER GENES IN BOTH LYMPHOID AND MYELOID CELLS.

C. -I- SUBCELLULAR LOCATION: NUCLEAR.

C. -I- SUBCELLULAR LOCATION: NUCLEAR.

C. -I- SUBCELLULAR LOCATION IN A T(11;19) (023; P13.3) CHROMOSOMAL

TRANSLOCATION IN ACUTE LEUKEMIAS CAUSING FUSION TO THE TRITHORAX
C. (MLL OR HRX) GENE PRODUCT WHICH CONTAINS DNA-BINDING MOTIFS
C. -I- SUBLIFING IN A ROGUE ACTIVATOR PROTEIN.

C. -I- SIMILARITY: TO HUMAN AF-9.

C. -I- SIMILARITY: TO YEAST TRANSCRIPTION INITIATION FACTOR TFIIF SMALL
C. SUBUNIT (TFG3/ANC1).
